

Kenta / Using Kenta

Understand evidence, findings and technical-review authority

Separate a detected document difference from an authorized human disposition and its follow-up.

Current · Revision 2 · Reviewed Oct 25, 2026

► Applicability

Inspect one stable review workspace

Open Reviews and select a finding. The comparison surface aligns exact source versions, raw and normalized values, excerpts and locations. The decision panel keeps impact, assigned reviewer, review state and next actions visible.

A difference is evidence to investigate. It does not by itself establish a technical conflict, acceptable substitution, available capacity or readiness to energize.

Preserve the basis of past decisions

New uploads do not rewrite the source versions behind historical decisions. Inspect source warnings and supersession before deciding whether a new comparison or reassessment is needed.

Inputs and terminology

Inputs and terminology

Term	Meaning
Finding	A retained comparison result such as a different value, missing confirmation, ambiguous source, unknown value or incompatible unit.

Term	Meaning
Disposition	An authorized reviewer's recorded outcome and rationale. It is distinct from the detected difference and from an equipment design approval.

Procedure

1. Open the retained comparison

Read the finding and open both source versions; verify that the cited fields belong to the intended equipment and revision.

2. Use the appropriate authority

A qualified reviewer with review permission records the disposition. Assign follow-up when additional evidence or clarification is required.

Verify the result

The finding is understood in its exact source context and has an explicit reviewer or next action.

What happens next

A reviewer disposition records a project decision; the software does not certify a design or authorize procurement, operation or energization.

Troubleshooting

The decision action is absent

Inspect your review authority and the finding's permitted current transitions. Ask the responsible qualified reviewer to act; ordinary project or billing membership does not grant review authority.
